## Environmental policy

Medicolle AB shall work to minimize its own environmental impact as far as it is ecologically justified, technically possible and economically reasonable.

### We do this by:

- Choose environmentally friendly products, as far as possible and demanded.
- Set requirements for continuous environmental work
- Optimize and coordinate transport to reduce emissions
- Increase our knowledge and commitment to environmental issues that affect us and our products in order to protect the environment and individuals.
- Sort our waste, reuse packaging materials and prevent pollution as far as technically possible.
- Identify, interpret and comply with the environmental laws and other environmental requirements that affect our activity.

Our environmental work will be continuously improved with the help of continuously revised environmental goals and action programmes.

This environmental policy shall be reviewed each time a new environmental review is carried out.

Anders Fransén, CEO
